

Sensitive Cleaning and Restoration Solutions for Historic Surfaces

Sponge-Jet's low dust, environmental cleaning and micro-abrasion technology is specified by architects, preservationists, and masonry professionals as the choice to precisely clean and remove surface contaminants from sensitive and ultra-sensitive substrates - while protecting the surrounding environment.

Removing patina from copper forty stories high

Cleaning soot and other contaminants from marble

Brick before

Brick after

Graffiti removal

Removing efflorescence

- **Sponge Media™** captures most dust without the use of water
- **Controllable blasting** for precise cleaning/depainting
- **Allows for inspection and superior visibility** during the sponge blasting process
- **Sponge Media is recyclable** which can lead to waste reduction of over 90%
- **Up to 20 times faster** than hand wiping or power tools
- **Increased visibility** during blasting
- **Selectively strip coatings and remove contaminants**
- **Specialized equipment delivers precise control and flow of media** at pressures from .1-7bar (2-100psi)
- **Damage by media ricochet is virtually eliminated**
- **Clean and degrease without water or liquid detergents**
- **No chemical runoff or leachable constituents**
- **Greatly reduced fugitive emissions** compared to conventional abrasives

Contaminants and Substrates...

- environmental pollutants
- paint / graffiti
- efflorescence / exfoliation
- soot / char
- mold / biological growth
- hard metal alloys / soft metals
- cast iron / carbon steel
- copper / tin / bronze
- granite / terra-cotta / sandstone
- brick / masonry block / concrete
